Cold Air Intake upgrade kit for Cforce 800/850xc 10-530

Pos.	Description / Nimitys	Code / Koodi
1	Air intakes	20-045
2	Air inlet and hoses	20-034
3	Air pipe	20-032

Upgrade Kit for Engine Intake and CVT Intake for Cfmoto Cforce 800/850 and 1000xc.

And why to use?

A Cold Air Intake for engine :

Upgrading from a stock design to a cold air intake is one of the best and easiest ways to increase horsepower. Increase the amount of air that's taken in and do so while the air is still cool.

Why does this matter?

Because cold/cool air is much more oxygen dense and oxygen dense air molecules equal more power. Cool air reduce airflow resistance which reduces unwanted turbulence within the pipes.

A Cold Air Intake for CVT:

Upgrading to cold air intake to CVT is the easiest way to get your your belt last longer. Heat is our enemy in CVT and in normally, air is drawn from the area right next to the engine, which, of course, is very hot because the engine heats up everything under the hood and all around it. When CVT intake has cool air , belt temperatures decrease significantly and reduces belt slippage.
